VAIDIKA SHIVHARE	PU02425EUG11035	• Front-End Design & HTML • Website Design • Navigation Structure • content management
NIKHIL KUMAWAT	PU02425EUG11011	• CSS & JavaScript • Content Management • Research & Documentation • Testing and Presentation

Problem Statement

People often face problems while sending goods, parcels, groceries, and gifts locally.

Traditional delivery methods:

- Slow and time-consuming
- Expensive for short-distance transportation
- Difficult to access for small local deliveries
- Lacking proper digital booking systems

There is a need for:

- A simple
- Fast
- Affordable
- User-friendly delivery platform for the same city

DROP GO solves this problem through a responsive web-based delivery service website.

Objectives

- To create a smart parcel delivery platform
- To provide same-day delivery services
- To simplify local parcel transportation
- To create an easy booking system
- To ensure secure customer authentication
- To design a user-friendly website interface

Methodology / Approach

Step 1: Requirement Analysis

- Understand user needs
- Identify required features
- Research on parcel delivery systems

Step 2: UI Design

- Design layout and navigation
- Create responsive structure

Step 3: Front-End Development

- HTML for structure
- CSS for styling
- JavaScript for interactivity

Step 4: Testing

- Test responsiveness
- Check navigation and forms

Tools & Technologies Used

Frontend Technologies

- HTML
- CSS
- JavaScript

Design & Development Tools

- VS Code
- Canva
- Google Chrome

Features Implemented

- Responsive UI
- Login & Create Account Popup Order Form
- Navigation System

Implementation Work

The following pages were developed:

- Home Page
- About Page
- Services Page
- Order Page
- Contact Page

Additional features implemented:

- Same-day parcel booking form
- Customer authentication popup
- Parcel category selection
- Responsive website layout

Results / Output

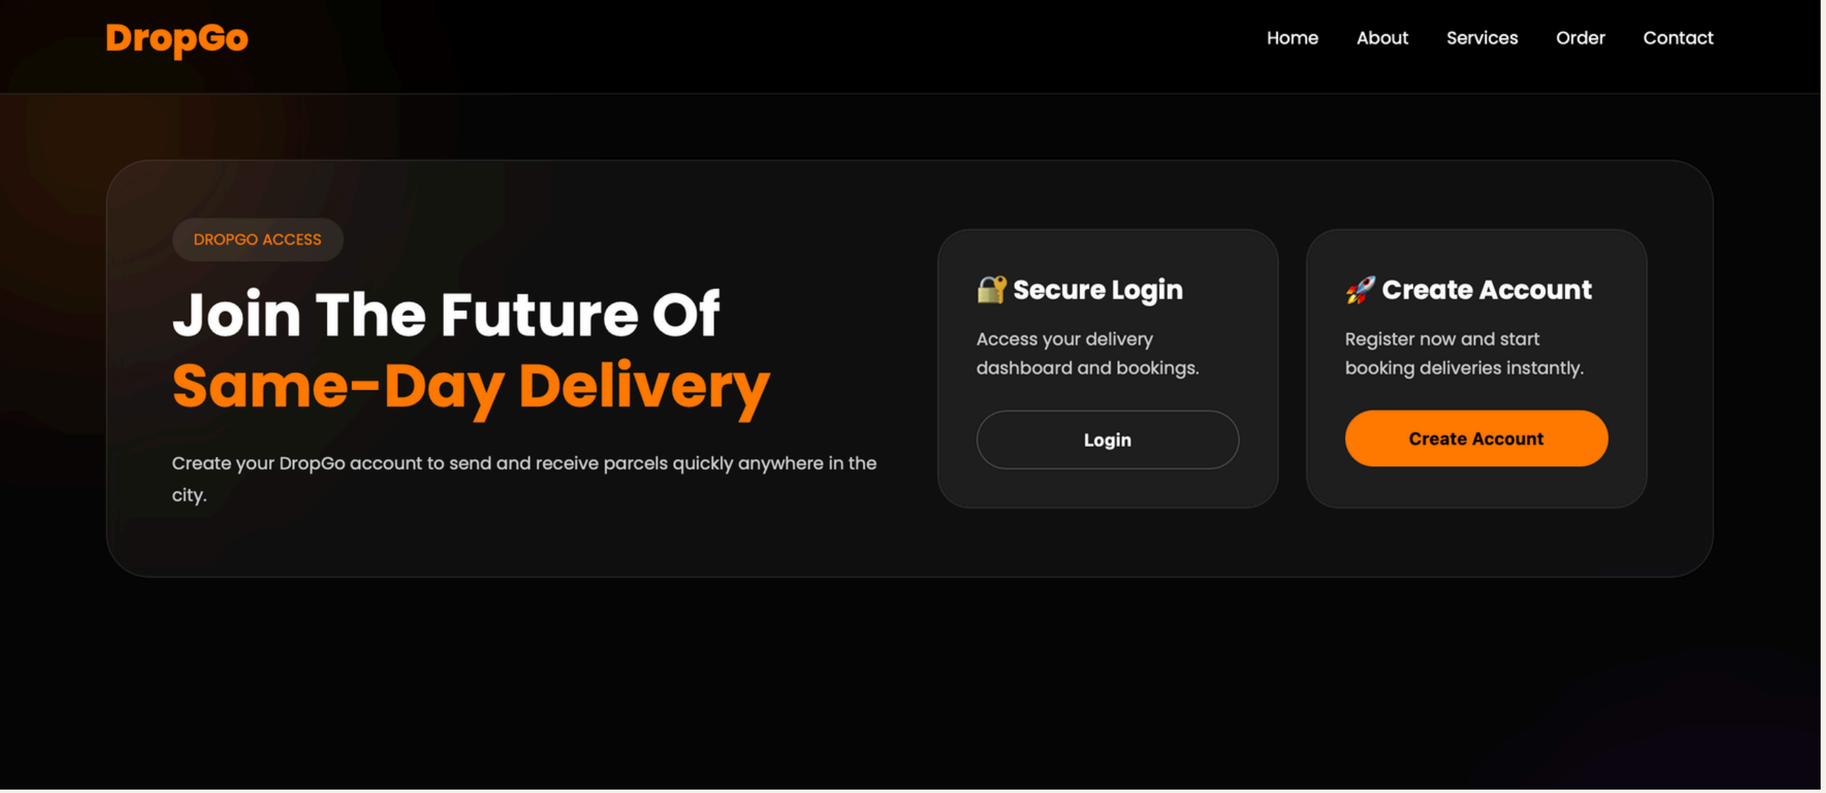

The project successfully provides:

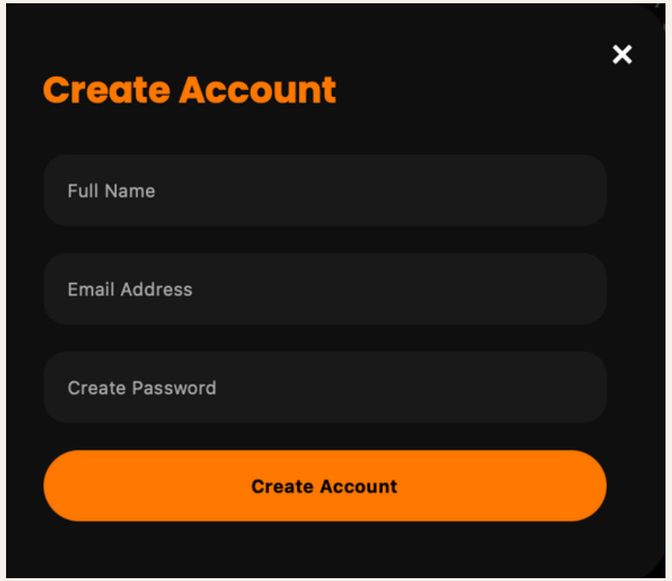

- Successfully created a functional website prototype
- Smooth navigation between pages
- User-friendly interface achieved
- Interactive forms and popup system implemented
- Modern and attractive design completed

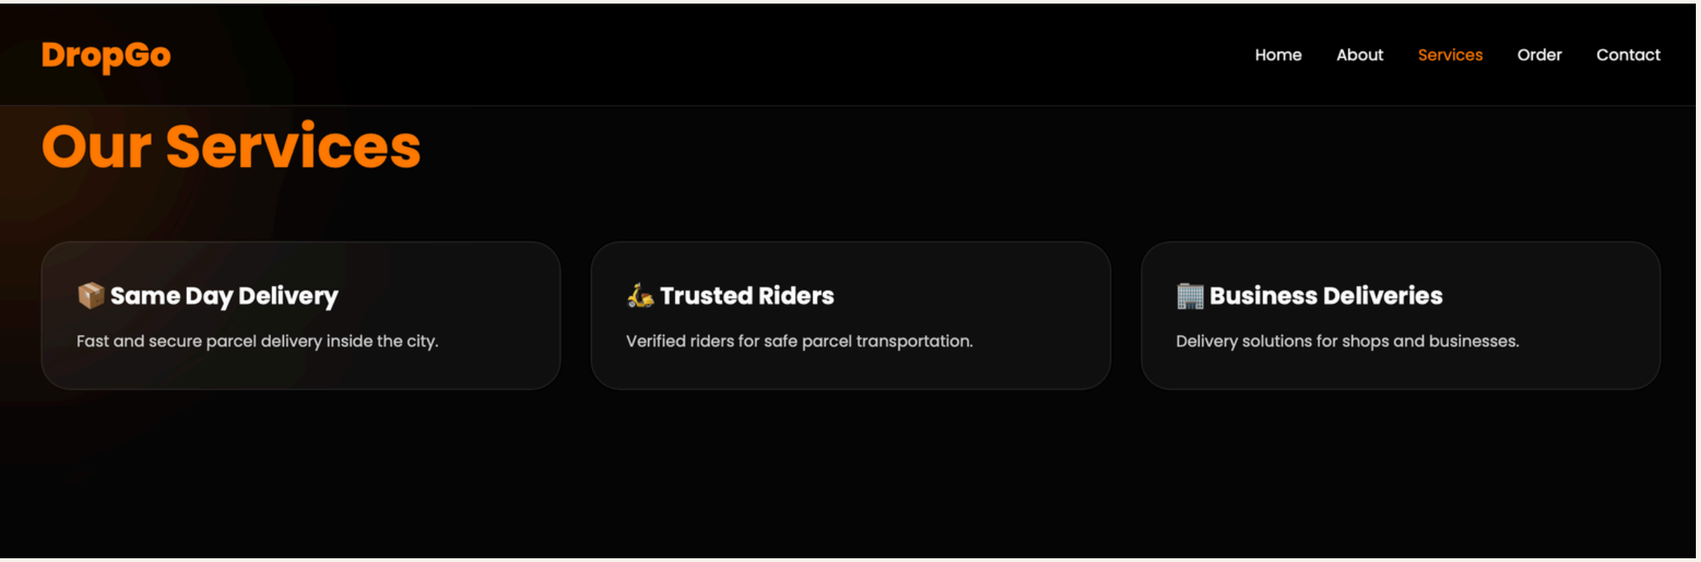

Outcome

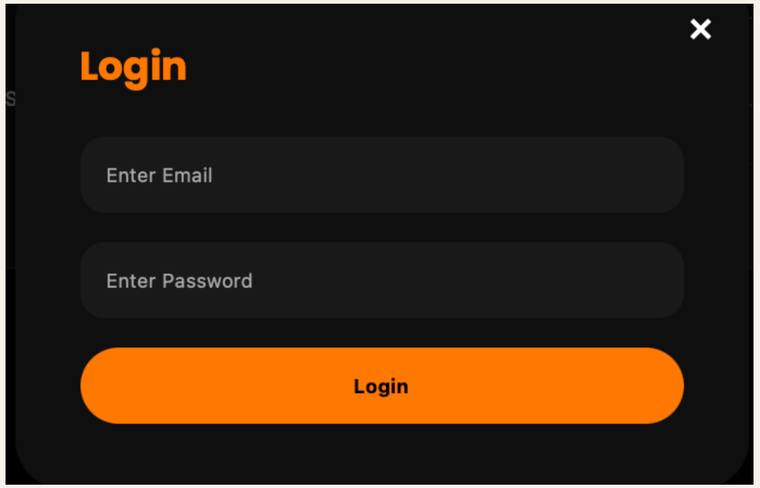

Users can easily:

- View services
- Navigate pages
- Place delivery requests

About DropGo

DropGo is a modern same-day parcel delivery platform designed to make city deliveries faster, easier and more secure for everyone. The platform connects users with trusted delivery riders who can safely transport parcels anywhere inside the city within the same day. With a simple and user-friendly interface, users can quickly place delivery requests, enter pickup and drop locations and choose parcel categories according to their needs.

The main goal of DropGo is to simplify local delivery services using smart technology and digital booking systems. Instead of waiting for multiple days for parcel delivery, users can receive fast and efficient delivery services at affordable prices. The platform is designed for students, businesses, shop owners and everyday users who need quick parcel transportation inside the city.

DropGo also includes customer authentication features such as login and account creation to provide a safer and more personalized experience for users. This website is currently a prototype project created to demonstrate how modern technology can improve local delivery systems and make parcel transportation more efficient, reliable and accessible for everyone.

Challenges Faced

- Designing responsive layouts
- Managing multiple webpages
- Creating popup login system
- Connecting navigation between pages
- Improving user interface design

Conclusion

DropGo successfully demonstrates a modern same-day parcel delivery platform for local city transportation. The project provides a simple, secure and user-friendly system for parcel booking and delivery management using web technologies.

Future Scope

Future improvements can include:

- Live parcel tracking system
- Online payment integration
- Rider management system
- Mobile application development
- Real-time notifications
- Database connectivity
- AI-based delivery optimization

Market Research & Inspiration

During the research phase, we studied and analyzed existing delivery platforms and applications such as:

- Uber
- Rapido
- Swiggy
- Porter

These platforms helped us understand:

- User interface design
- Delivery workflow
- Customer convenience features
- Fast local delivery systems

We used these ideas as inspiration and attempted to create a simpler and more user-friendly prototype platform through DropGo.
